● SPECIFICATIONS

- Sanding lance
- 5 m hose
- Sand suction tube
- Eye protection

The sandblasting kit is used to clean off, get the rust off, decoke stone, steel, wood bases etc.

It is made of a sanding lance, 5 m hose fitted with a sand feeding tube and EN-certified eye protection.

When water passes through the nozzle of the lance, the sand is simultaneously sucked, and the water/sand mix is propelled at high pressure at the surface to be sandblasted.

Use only sand specially suited for sandblasting (take advice from your supplier).

You can use sands of different granularities according to the surface to be treated (Granularity N°2 is the most multipurpose).

USE

1. *Screw the sanding lance on the gun.*
2. *Connect the sand suction hose on the head of the lance.*
3. *Connect the sand feeding tube on the other end of the hose.*
4. *Insert the sand feeding tube halfway down the sand.*
5. *Open the water tap.*
6. *Turn on the pressure washer.*
7. *Press the trigger of the gun.*
8. *The water/sand mix jet is propelled under high pressure.*

The user of the sandblasting kit must wear En certified eye protection, as well as protective clothes.
